

TOOLS NEEDED

Plastic clippers.

Files.

Polystyrene
cement.

♥ To construct your Knights, first carefully clip the pieces away from the plastic frame.

♥ For the best results, gently file away any mould lines that may show on the figure.

♥ Then choose the parts you want for a particular model, and glue them together with polystyrene cement.

♥ To mount the figure on the round base, you can either glue the figure to the base and landscape around it, or landscape the base first and glue the figure to the basing material.

♥ For the best painting results, paint or spray paint a light undercoat on the constructed model before starting.

For more details on plastic figure construction see Kev's article on putting our plastic Elves together.

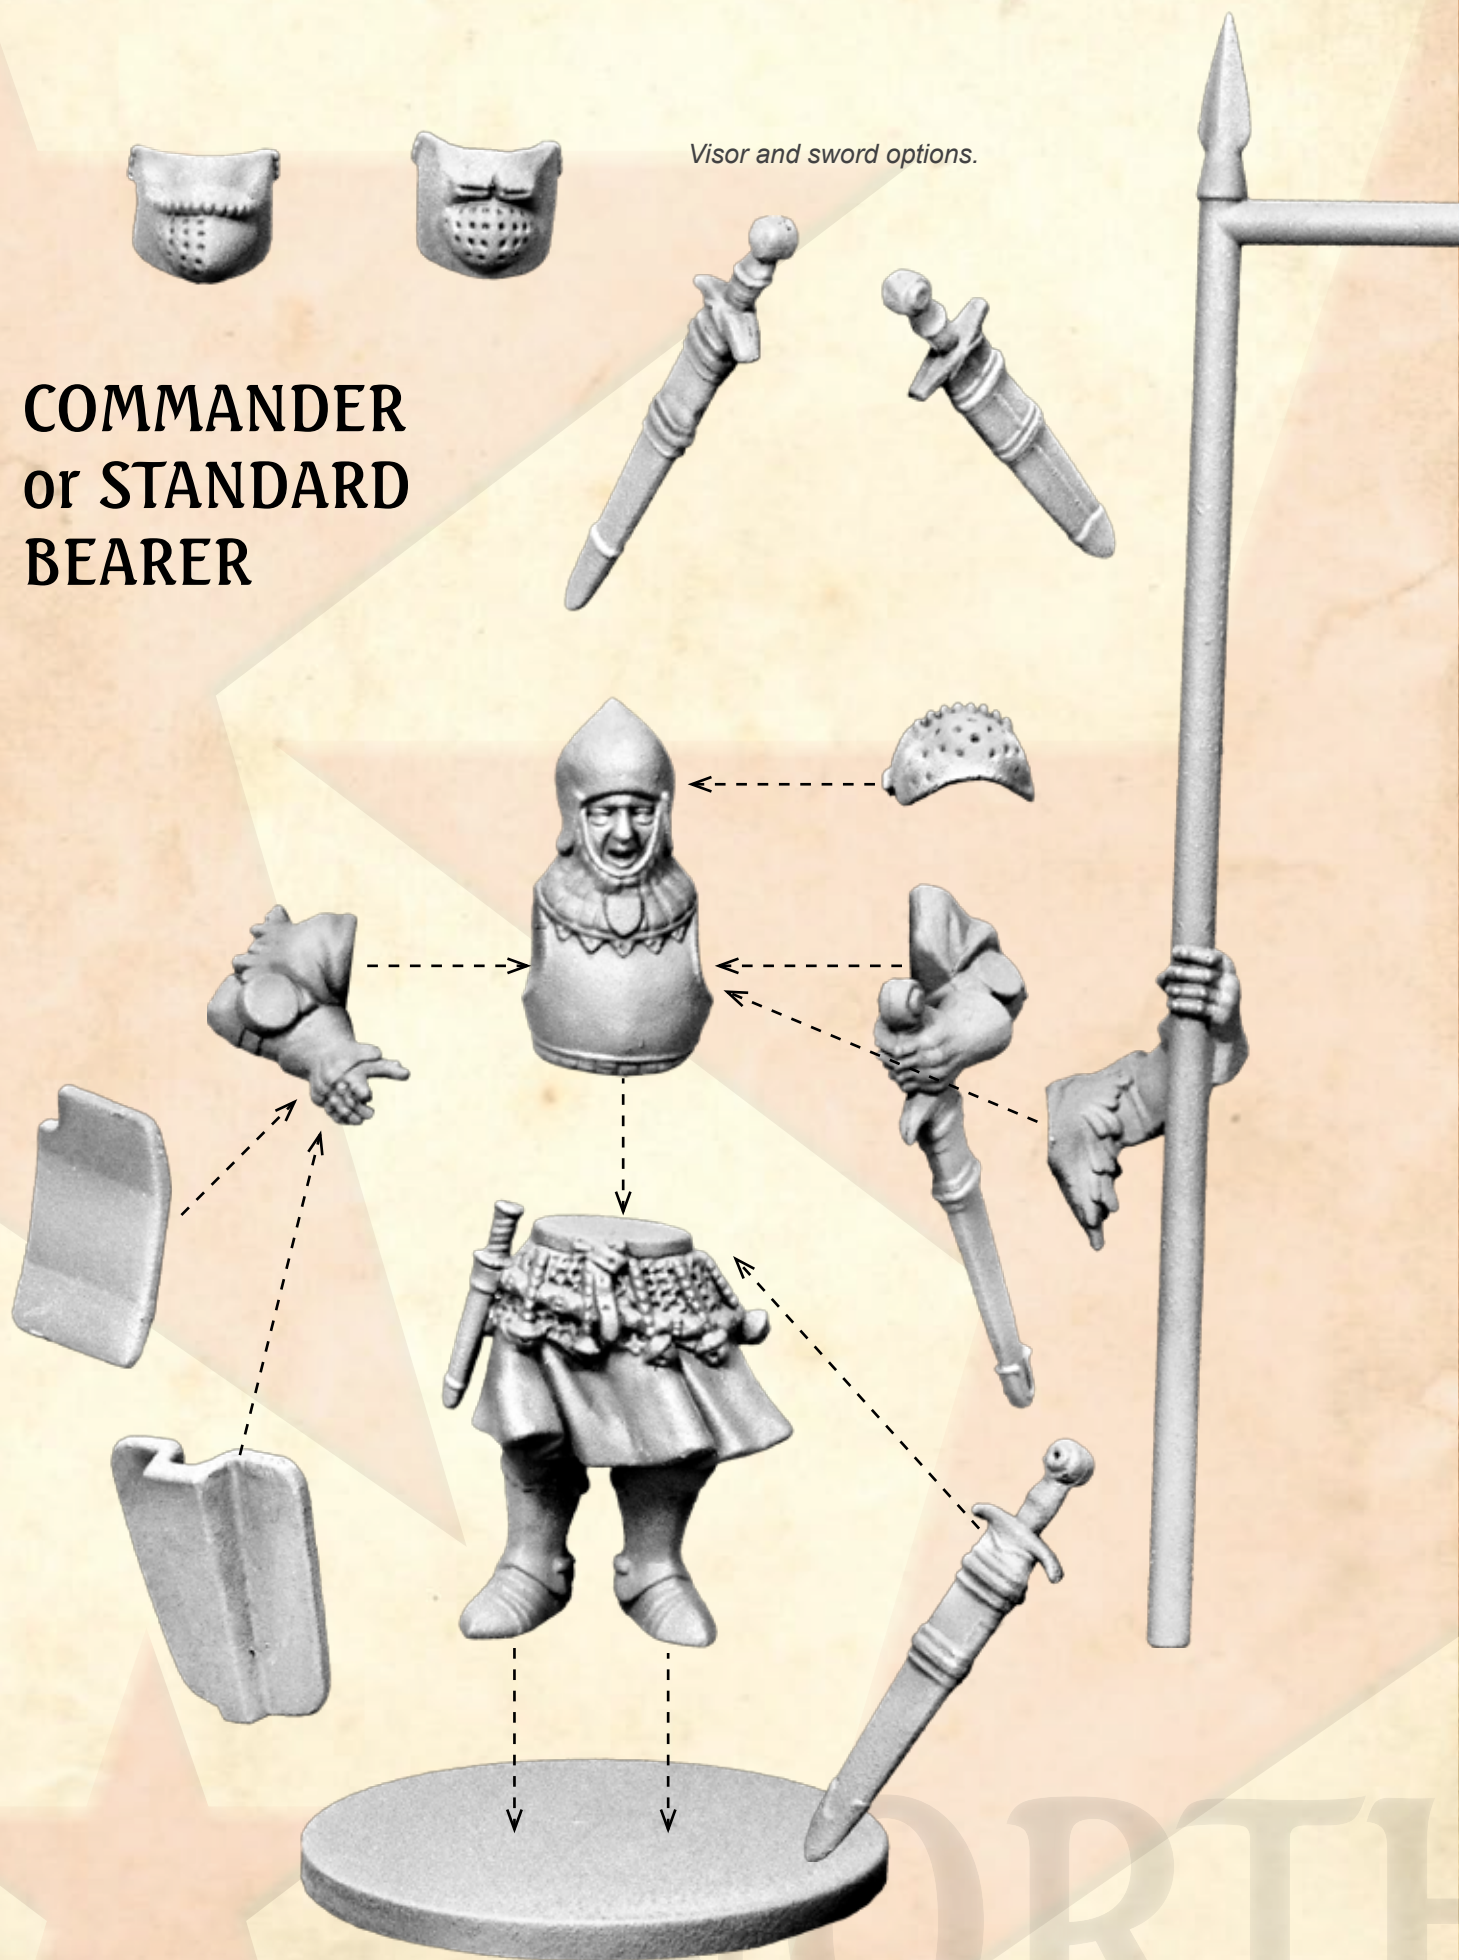

Do a dry run to get the arm positions correct to take the hands.
